DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-4, 9-27, drawn to a method of detecting a protein-nucleic acid interaction using a hybrid protein comprising a $\sigma 54$ activator domain and a nucleic acid binding domain.

Group II, claim(s) 5-8 and 10-27, drawn to a method of detecting a protein-protein interaction using a first and second hybrid protein, wherein one hybrid protein comprises a constitutively active $\sigma 54$ activator domain and the other hybrid protein comprises a nucleic acid binding domain.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The special technical feature of Group I is the fusion of a $\sigma 54$ activator domain and a nucleic acid binding domain, which can then be used to detect the ability of the binding domain to either interact with or bend a nucleic acid.

The special technical feature of Group II is the use of two different fusion proteins, one comprising a $\sigma 54$ activator domain fused to a first protein of interest and the other comprising a nucleic acid binding domain fused to a second protein of interest, wherein the two fusion proteins can be used to detect whether the two proteins of interest interact. This special technical feature is different from the special technical feature of Group I because the methods use functionally and structurally different fusion proteins, and are furthermore directed to identifying different types of biochemical interactions (i.e., protein-nucleic acid in Group I versus protein-protein interactions in Group II). Because the two groups are associated with different special technical features, the inventions are properly restricted as being drawn to different inventive methods.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
